Jersey City, NJ | +1 (551) 344-5273 | akash.r.mahant@gmail.com | [LinkedIn](#) | [Portfolio](#)
Financial Engineer | MS Finance, GPA 3.86 | Quantitative Strategies | CFA Level 1 Candidate

PROFESSIONAL SUMMARY

Quantitatively oriented finance professional with an MS in Finance from Stevens Institute of Technology and demonstrated expertise in algorithmic strategy development, derivatives, fixed income analytics, and machine learning for finance. Experienced building end-to-end data pipelines, automating financial workflows, and applying statistical models to real market data. Proficient in Python, R, and Bloomberg Terminal. CFA Level 1 Candidate.

EXPERIENCE

Volunteers of America – Greater New York | Staff Accountant

January 2025 – April 2026 | New York, NY

- Engineered a document automation pipeline using Microsoft Power Automate that reduced manual processing time by 85%, demonstrating applied systems thinking in a financial operations context
- Performed daily quantitative variance analysis on large-volume payment records in Microsoft Business Central, maintaining 99%+ accuracy and reducing unresolved items by 30%
- Supported forecasting models by providing structured spending-trend data to program managers, improving budget accuracy

Accenture | Senior Process Associate

August 2019 – July 2022 | Mumbai, India

- Developed Excel macro-based automation systems for financial workflow error resolution, achieving 90% efficiency improvement across 500+ weekly invoice transactions
- Built performance reporting dashboards (3x3 format) tracking productivity, error rates, and team metrics; supported client-facing data presentations
- Managed ERP transitions including Oracle Cloud and Lawson, with hands-on processing of P2P workflows at scale

Money Honey Financial Services | Financial Advisor

July 2018 – November 2018 | Mumbai, India

- Constructed and actively managed a \$750K diversified portfolio across equity, fixed income, and alternative instruments, achieving 8% ROI through quantitative risk assessment and asset allocation
- Applied fundamental and technical analysis to guide client investment decisions across mutual funds, fixed deposits, and debentures

EDUCATION

Stevens Institute of Technology | Master of Science, Finance

September 2022 – May 2024 | Hoboken, NJ

GPA: 3.86/4.00 | Relevant Coursework: Derivatives, Fixed Income, Quantitative Hedge Fund Strategies, Econometrics, Trading Analytics, Portfolio Construction, Python for Financial Applications, Introduction to R, Bloomberg & Thomson Reuters, Data Visualization

QUANTITATIVE PROJECTS

Machine Learning Model (Random Forest Classifier) for Stock Selection & Mean-Variance Optimization

- Implemented an RFC model in Python that improved stock selection accuracy by 15% over baseline
- Constructed optimized portfolios using mean-variance optimization, achieving a highest return of 7.13% on live paper trades via Interactive Broker

Reversal Trading Strategy – S&P 500 Back-test

- Designed and back-tested a quarterly reversal strategy across 50 S&P 500 constituents over a 5-year period, achieving a cumulative return of 16.67%
- Applied rigorous performance attribution and strategy evaluation methodologies

Options Trading & Derivatives Strategies – Interactive Broker

- Executed and analyzed derivatives strategies including bull put spreads, straddles, and bear call spreads across 50+ simulated trades
- Achieved a 10% simulated portfolio improvement through systematic strategy selection and risk management

Fixed Income Analysis – Johnson & Johnson Bonds

- Conducted duration, convexity, and yield analysis on J&J bonds across multiple time horizons
- Developed portfolio recommendations that balanced yield and risk, with potential to increase portfolio yields by up to 20%

AI-Powered SEC Filing Research System | February 2026

- Engineered a local RAG pipeline to process multi-year SEC filings, enabling structured query answering with source-cited, on-device processing for compliance and reproducibility

Discounted Cash Flows Analysis – Apple Inc. | Bloomberg Terminal

- Built a multi-scenario DCF model using Bloomberg data; forecasted 6% annual revenue growth and identified 7% intrinsic value upside

TECHNICAL SKILLS

Programming & Modeling: Python (Pandas, NumPy, Scikit-learn), R, Excel (Macros, Solver, Pivot Tables), Power Automate

Financial Engineering: Derivatives Pricing, Fixed Income Analytics, Mean-Variance Optimization, Algorithmic Back-testing, Risk Modeling, DCF Valuation

Platforms & Tools: Bloomberg Terminal, Interactive Broker, Tableau, Oracle Cloud, Microsoft Business Central, Infor Lawson

Quantitative Methods: Regression Analysis, Machine Learning (RFC), Monte Carlo Simulation concepts, Time-Series Analysis

CERTIFICATIONS & AWARDS

- CFA Level 1 Candidate
- Bloomberg Market Concepts Certification – Bloomberg for Education (December 2022)
- Fundamentals of Consulting Certification – Harvard Business Publishing (December 2022)
- Accenture Star of Business Award (December 2020 & March 2022)
